EMPLOYMENT HISTORY

Laravel Developer at Bytekat Technologies Private Limited

Jul 2023 - Present | Aluva

- Built and maintained Laravel-based backend modules with clean, reusable code.
- Developed REST APIs, optimized SQL queries, and handled data operations in MySQL and Oracle.
- Implemented queue-based jobs for Excel exports and background processing.
- Collaborated with the team to review code, fix bugs, and improve system performance.
- Worked on real-time project features across both frontend (HTML, CSS, JavaScript, Bootstrap) and backend (PHP, Laravel).

EDUCATION

Bachelor of Computer Applications

2020 - 2023 | Al-Ameen College, Aluva

Computer Science

Mar 2020 | Government Higher Secondary School, Edathala

LANGUAGES

English	Malayalam	Hindi
---------	-----------	-------

CERTIFICATIONS

Python 3.4.3

Nov 2021

Successfully completed online Python 3.4.3 training organised by Al-Ameen College in accordance with Spoken Tutorial Project, IIT Bombay. Learned how to use Python to scrape data from websites and implementation of machine learning algorithm using python.

PROJECTS

KAU (Kerala Agricultural University)

Apr 2024

I developed a weather forecasting system designed to give farmers real-time updates. My focus was on building a reliable backend that could process meteorological data and deliver it as simple, actionable alerts for the agricultural community.

FedBCM & FedServe

I worked on backend services for banking compliance and management. In this role, I focused heavily on security and API reliability, ensuring that sensitive financial data was handled correctly and that the systems met strict banking standards.

RoofTech / Liberty Manager / Scandinavian Supplies Australia

I managed the development of several internal ERP and inventory systems for construction and supply firms. I basically automated their manual workflows, creating tools that track stock and manage operations across different regions like Australia.

BiteDine Dubai

I built a food takeaway and booking platform specifically for the Dubai market. I handled the core logic for the ordering process, making sure that from the moment a user picks their meal to the final checkout, the system remains fast and bug-free.

B4U Fitness - Workout Tracking Web Application (Live Project)

A personal fitness tracking platform that allows users to log workouts, monitor progress, and export their data for analysis. Built with a focus on simplicity and speed. Includes workout history, progress charts, and export features for easy reporting.
